P0 fixed rules, no model
P1 a model calls the tools itself
P2 (mine) a model picks one option the server built
P3 P2, with every relevant status check run first
Executor
checks each request: the role's rights, the state version, the budget
writes a receipt
Event state
plan versions, holds, receipts
Planner
builds and checks the options
One recorded P2 decision (development case dev02, version 1.0)
Chosen by a model call: use the backup projector for the demonstrations
claude-sonnet-5.5, 3.75 s, $0.0135
Checked by the server: receipt rcpt_0003, after the scripted organizer approved $35
one gate for every policy and person
