
the next decision uses what actually happened
Language model
holds no tool that writes
anthropic/claude-sonnet-5.5 through the OpenRouter API
reads the message
does it apply, what changed, check or not
strict, schema checked
picks one option id
from the menu
strict, schema checked
OpenRouter model API
One gate
every change, from every policy and every person, passes here
allowed for this role?
plan still current?
within budget?
Event plan
changed only through the gate
A message
a claim, not a fact
texts from people and suppliers
The server
Selective checks
verify only what could change the decision
a status check, e.g. supplier tracking
Planner
builds the options and checks each against the deadline, the people and the budget
a menu of checked options
Receipt
the server's own record of each accepted change
board HTTP API
approve, report, attest
next
MBTA V3 transit alerts as context only
designed, not connected
sandbox tool API: status checks, holds, plan changes, receipts
Spending
a hold first, a free reservation that expires on its own
A person approves
on the board
